

Dear,

I am writing to express my interest in the Technical Systems Specialist position advertised on your site. I am passionate about using my technical expertise to contribute to an organization that values community, collaboration, and innovation. With extensive experience in engineering solutions, data-driven decision-making, system administration, system development, software updates, and project delivery, I am eager to bring my skills to support the team and students within the UTAS community.

With three years of experience as an Application Specialist at Link Technologies Tasmania, I am confident in IT configuration, ICT infrastructure, IT support, and system maintenance. The role requires keeping applications updated, maintaining and upgrading legacy systems, and following best practices. For instance, I have implemented gRPC, Cloudflare, Reverse Proxy, and IIS to configure the M-Files system according to their best practices, using gRPC requirements for new integrations.

I have honed my skills in designing comprehensive solutions, developing functions, maintaining and deploying for M-Files Application related to Federated Authentication (SSO), Email Source, SMTP, Microsoft Co-authoring, Microsoft SQL Server migration. This has involved using various programming languages and environments which includes Microsoft Window Server, Microsoft SQL Server, Oracle, Web Services, and REST APIs.

Moreover, I am confident in my communication and leadership skills to help achieve team objectives. I served as an engineering lead for a business solution and contributed to projects across systems, budgets, and strategic priorities. One project involved significant challenges, including restructuring a 10-year-old system for nine departments, bridging the gap between business and technical communication, implementing workflow-based logic, and managing tight deadlines.

To address these challenges, I proactively analyzed customer requirements from initial business briefs, developed questionnaires, and organized workshops and training sessions. Providing sample concepts was essential in helping clients visualize and refine their needs. I believe that effective communication and training are key to success, so I ensured all solutions were thoroughly documented to support user understanding and adoption. As a result, I successfully delivered automated solutions for knowledge management, project management, and tendering process management. With this experience, I am confident in bringing strong analytical skills to your team.

As an Australian citizenship with full work rights, I am excited about the possibility of joining your team and would welcome the opportunity to further discussion on how my background, skills and achievements align with the needs of your team.

I am looking forward to your response. I am reachable by phone: 0404-952-245 or email: haydenthai@gmail.com. Thank you for your consideration.
