

Programming Languages	<i>C#, Python, JavaScript, TypeScript, DAX, M-Language, SQL, Go, PowerShell, PHP, HTML</i>
Frameworks	<i>.NET, React, Vue, Next.js, Bootstrap, Tailwind, Blazor, React Native</i>
Databases	<i>MS SQL Server, MySQL, Oracle, PostgreSQL</i>
DevOps Cloud	<i>Azure DevOps, Docker, Git, NGINX, Traefik, IIS, Networking, DNS, Cloudflare, Microsoft Azure, Microsoft Entra (ID), Oracle Cloud, Linux</i>
Apps	<i>Jupyter Notebook, VSCode, Visual Studio, WordPress, Power BI, Tableau, RapidMiner, Eclipse, Xcode, Android Studio</i>
Roles	<i>IT Help Desk, Software Support, Data Engineer, Business Analyst, Solution Architect</i>

Experience

Software Engineer	Link Technologies Tasmania	April 2022 - Present
- Developed automated .NET solutions for Accounts Payable integration across Xero, MYOB, and SAP B1, reducing manual workload by 80%, with version control managed via Azure DevOps. - Led end-to-end software design and implementation to restructure systems across 7 departments for a 75-year-old organization, managing over 2TB of enterprise data. - Collaborated with cross-functional teams to assess and validate infrastructure readiness for SQL-based application migrations, contributing to risk mitigation and successful deployment. - Supported IT help desks, troubleshoot issues, provided customer services more than 10 companies. - Configured and maintained middleware services including Microsoft Entra Integration Apps, IIS, SSO, Federated Authentication, shared file systems, and email storage to modernize infrastructure and reduce legacy dependencies. - Designed and implemented a 7-page interactive dashboard using Python, Power BI, ETL pipelines, DAX, Star Schema, and SQL for data-driven insights. - Conducted business analysis with clients to identify pain points, deliver solution architecture, and support project managers in strategic decision-making.		
IT Help Desk (Volunteering)	Launceston Library	Jan 2022 – Dec 2022
- Monitored and responded to incoming requests. - Provided technical support and advised to customers.		

Project

Full-Stack Infrastructure Engineer – Self-Hosted Systems	2023 - Present
<i>A self-hosted software stack enabling secure global access, built with True NAS, VPN, LINUX, full-stack tools. Purpose-built for document management, private data sharing and cost savings by replacing cloud storage.</i>	
https://homepage.hthai.cloud	https://hththai.github.io/publish/
https://dashboard.hthai.cloud	
- Designing and implementing minimal API by ASP.NET backend services with SQL database to manage employee data, and a React-based front end. - Establishing a highly secure connection by proxy and reverse proxy, leveraging Oracle VM, NGINX services, Traefik and WireGuard, Tailscale. - Developing and deploying CRUD operations for employee database, incorporating authentication through a Single Page Application (SPA) by Microsoft Entra ID. - Administering Cron jobs, Rsync, backups, TrueNas, NextCloud, and Collabora for document management and backup storage.	

Certificates

M-Files Solution Engineer and Development Certificate	Present
ACS Certified Professional	2021
Master of Information Communication Technology	Jan 2019 – Dec 2020
Bachelor of Business Administration: Finance Major and MIS minor	Aug 2014 – Dec 2018
